

What Is Claimed Is:

1. A coating liquid for an intermediate layer of an electrophotographic photoconductor comprising a titanium oxide and a polycarboxylic acid polymer in a solvent.
2. The coating liquid for an intermediate layer of an electrophotographic photoconductor according to claim 1, wherein said polycarboxylic acid polymer is at least one selected from a saturated polycarboxylic acid polymer and an unsaturated polycarboxylic acid polymer.
3. The coating liquid for an intermediate layer of an electrophotographic photoconductor according to claim 1, wherein the content of said polycarboxylic acid polymer is 0.3 to 10 parts by weight in respect to 100 parts by weight of said titanium oxide.
4. The coating liquid for an intermediate layer of an electrophotographic photoconductor according to claim 1, wherein an acid value of said polycarboxylic acid polymer is 100 to 400 mgKOH/g.
5. The coating liquid for an intermediate layer of an electrophotographic photoconductor according to claim 1, wherein said titanium oxide has a purity of 99.0% or higher.
6. The coating liquid for an intermediate layer of an electrophotographic photoconductor according to claim 1, further comprising a resin.

7. The coating liquid for an intermediate layer of an electrophotographic photoconductor according to claim 6, wherein the content of said titanium oxide is 300 to 800 parts-by weight in respect to 100 parts by weight of said resin.

8. A method of manufacturing a coating liquid for an intermediate layer of an electrophotographic photoconductor comprising a step for mixing a solvent, a titanium oxide, and at least one of a saturated polycarboxylic acid polymer and an unsaturated polycarboxylic polymer.

9. An electrophotographic photoconductor comprising an intermediate layer and a photosensitive layer on an electroconductive substrate, wherein said intermediate layer contains a titanium oxide and a polycarboxylic acid polymer.

10. The electrophotographic photoconductor according to claim 9, wherein said polycarboxylic acid polymer is at least one selected from a saturated polycarboxylic acid polymer and an unsaturated polycarboxylic acid polymer.

11. The electrophotographic photoconductor according to claim 9, wherein the content of said polycarboxylic acid polymer is 0.3 to 10 parts by weight in respect to 100 parts by weight of said titanium oxide.

12. The electrophotographic photoconductor according to claim 9, wherein an acid value of said polycarboxylic acid polymer is 30 to 400 mgKOH/g.

13. The electrophotographic photoconductor according to claim 9, wherein said titanium oxide has a purity of 99.0% or higher.

14. The electrophotographic photoconductor according to claim 9, wherein said intermediate layer further comprises a resin.

15. The electrophotographic photoconductor according to claim 14, wherein the content of said titanium oxide is 300 to 800 parts by weight in respect to 100 parts by weight of said resin.

16. An electrophotographic apparatus comprising:
an electrophotographic photoconductor;
a charger configured to charge the
electrophotographic photoconductor;

a light irradiator configured to irradiate the
electrophotographic photoconductor with a light to form an
electrostatic latent image on the electrophotographic
photoconductor;

an image developer configured to develop the
electrostatic latent image with a developer comprising a
toner to form a toner image on the electrophotographic
photoconductor;

a transfer configured to transfer the toner image
onto a receiving material; and

a fixer configured to fix the toner image on the receiving material;

wherein said electrophotographic photoconductor comprises at least an intermediate layer and a photosensitive layer on an electroconductive substrate, and said intermediate layer contains a titanium oxide and a polycarboxylic acid polymer.

17. The electrophotographic apparatus according to claim 16, wherein said light irradiator has a semiconductor laser.

18. A process cartridge for an electrographic apparatus comprising an intermediate layer which comprises a titanium oxide and a polycarboxylic acid polymer, and a photosensitive layer on an electroconductive substrate.
